

The Battle of the Neighborhoods - Report

1. Introduction & Business Problem :

Hillsborough county in Florida is home to Tampa and many other unincorporated towns. The area, in addition to drawing tourists is rapidly growing, not just with retirees but younger families coming for the job opportunities as well as the mild weather and recreational opportunities. These people moving to the area generally love to eat out frequently and enjoy the parks and outdoor recreational activities the area has to offer. Any new business venture or expansion needs to be analyzed carefully. The insights derived from analysis will give good understanding of the business environment which help in strategically targeting the market. This will help in reduction of risk. And the Return on Investment will be reasonable.

Business Problem

The tourist industry as well as the influx of people moving to areas of the county creates numerous opportunities for restaurants to locate there. The large area of the county also creates the challenge of determining what the best locations for a new business will be. This project will create a model to help a restaurant company decide where to locate a new restaurant(s) to maximize the opportunity for success.

2. Data

Data 1: We will use the zip codes contained within Hillsborough County to break the large area into neighborhoods. The web site zip-codes.com (<https://www.zip-codes.com/>) is used to provide the zip code list, city name and population for each area in the county. The website Foursquare (<https://es.foursquare.com/>) will be used to gather existing venue information for in each of the neighborhoods. Information on businesses will be obtained from Foursquare.

The data obtained will allow identification of neighborhoods that are good candidates for a new restaurant location. A K-means clustering algorithm will then be used to group neighborhoods that are similar allowing for the identification of areas where multiple locations of a restaurant chain could locate.

Data2: The website Foursquare (<https://es.foursquare.com/>) will be used to gather existing venue information for in each of the neighborhoods. Information on businesses will be obtained from Foursquare.

The data obtained will allow identification of neighborhoods that are good candidates for a new restaurant location. A K-means clustering algorithm will then be used to group neighborhoods that are similar allowing for the identification of areas where multiple locations of a restaurant chain could locate

	ZIP Code	Classification	City	Population
0	33503	P.O. Box	Balm	108
1	33508	P.O. Box	Brandon	0
2	33509	P.O. Box	Brandon	0
3	33510	General	Brandon	27610
4	33511	General	Brandon	52003

3. Methodology

In this project, I will use the basic methodology as taught in Week 3 lab.

	ZIP Code	Classification	City	Population	Latitude	Longitude
0	33510	General	Brandon	27610	27.951980	-82.320020
1	33511	General	Brandon	52003	27.912380	-82.319210
2	33527	General	Dover	15203	27.992640	-82.216890
3	33534	General	Gibsonston	12839	27.835040	-82.378110
4	33547	General	Lithia	19813	27.838770	-82.174450
5	33548	General	Lutz	5807	28.135350	-82.478070
6	33549	General	Lutz	16132	28.087500	-82.439040

Above, I have done convert addresses into their equivalent latitude and longitude values. Then we will use the Foursquare API to explore venues in the neighborhoods in Hillsborough County, Florida.

	ZIP Code	Neighborhood	Latitude	Neighborhood	Longitude	Venue	Venue Latitude	Venue Longitude	Venue Category
0	33510		27.95198		-82.32002	Ulta Beauty	27.941689	-82.322067	Cosmetics Shop
1	33510		27.95198		-82.32002	Ice Sports Forum	27.948889	-82.330073	Skating Rink
2	33510		27.95198		-82.32002	Anthony's Coal Fired Pizza	27.938068	-82.315844	Pizza Place
3	33510		27.95198		-82.32002	Kobe Japanese Steakhouse - Brandon	27.939480	-82.321710	Japanese Restaurant
4	33510		27.95198		-82.32002	Wawa	27.938434	-82.310696	Convenience Store
5	33510		27.95198		-82.32002	Barnes & Noble	27.939262	-82.324779	Bookstore
6	33510		27.95198		-82.32002	Craft Beer Cellar Brandon	27.937067	-82.315972	Beer Store
7	33510		27.95198		-82.32002	PDQ	27.936530	-82.319334	Fried Chicken Joint
8	33510		27.95198		-82.32002	Ross Dress for Less	27.937923	-82.323671	Clothing Store
9	33510		27.95198		-82.32002	Ploy Thai	27.937183	-82.316008	Thai Restaurant

Then group the neighborhoods into clusters. The K-means clustering algorithm will be used to complete this task. And also, the Folium library to visualize the neighborhoods in Hillsborough County and its emerging clusters.

	ZIP Code	Classification	City	Population	Latitude	Longitude	Cluster Labels	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue

Based on dataframe analysis above Cluster 4 (outer suburban Tampa areas) would be the best places to open a new restaurant chain locations.

5. Discussion

In this section, I will be discuss the observations I have noted and the recommendation that I can make based on the results.

This analysis is performed on a very limited set of data. For the purpose of this learning exercise that may be ok. Additional data such as historic population growth, income, and maybe some traffic congestion data would allow us to produce a more complete result.

- The mid-town Tampa area, represented by cluster 1, appears pretty well saturated with all types of venues creating a lot of competition and therefore, risk.
- The outlying areas represented by cluster 0 are spread across a large distance. This distance would make the logistics of delivery more expensive. With the rapid growth of the area, this could be potential for future expansion.
- Cluster 2 is concentrated around the theme parks in the county. This is mainly tourist areas, hotels/motels and other temporary lodging. If someone wanted to focus on tourists, that would be an area to consider but this company wants a more consistent and growing client base so this area wouldn't be suitable.
- Cluster 3 are the older and more established areas of the inner suburbs. The population is steady and those areas have many established restaurants.
- Cluster 4 are the outer suburbs and towns. These areas are growing rapidly with new families and younger, working age people. While some areas are spread out, concentrating on the areas that are concentrated will keep logistics costs to a minimum.

6. Conclusion

Although all of the goals of this project were met there is definitely room for further improvement and development as noted. However, the goals of the project were met and, with some more work, could easily be developed into a fully fledged application that could support the opening a business idea in an unknown location.
